ABOUT ME

Computer Programming student at Izmir University of Economics and a software developer with a Full-Stack orientation. Producing projects in web, desktop, and game development areas with experience gained at Eron Yazılım A.Ş. Combines a strong design vision with robust database architectures to provide end-to-end solutions. Recently focused on data science and machine learning with Python; actively focusing on integrating generative AI technologies into software processes.

EXPERIENCE

Eron Yazılım A.Ş. | Izmir, Turkey

Web Developer | 2025

- Managed end-to-end development, update, and maintenance processes of the company's corporate web projects.
- Built user-centric, responsive, and high-performance dynamic front-end architectures using JavaScript, HTML5, and CSS3.
- Took an active role in sprints conducted with Agile methodology, resolving critical system bugs and ensuring backend integrations.

Freelance | Remote

Web Developer & Cover Art Designer | 2022 – 2024

- Developed and published modern, SEO-friendly corporate websites by conducting requirement analysis for clients across various sectors.
- Designed professional album cover arts for the music industry and digital content creators; managed digital marketing and social media visual processes of brands using Canva and Photoshop.

PROJECTS

TV Series and Movie Forum | *PHP, MySQL, JavaScript* | 2024

- Coded an interactive community platform with a dynamic scoring system where users can review and comment on content. Built secure user registration and authorization infrastructure.

Dynamic Football Statistics Platform | *JavaScript, HTML, CSS, PHP* | 2024

- Developed an interactive structure that fetches match data from external sources and presents it in real-time without needing page refreshes, by configuring DOM manipulation and asynchronous architecture.

Smart Home Personal Area Network (PAN) System | *Python, IoT, Network Protocols* | 2025

- Designed a closed-loop network architecture where devices communicate locally with each other to ensure the safety and real-time status tracking of elderly individuals and children at home. Conducted successful tests on intra-network communication protocols and data transfer.

Personal Portfolio Website | *HTML5, CSS3, JavaScript* | 2024

- Published my personal website conforming to modern design principles, responsive, and interactively showcasing my projects.

Cinema Ticket Automation | *C#, Windows Forms* | 2023

- Developed a performance-oriented desktop application that automates session scheduling, dynamic seat selection, and ticket printing operations, ensuring data consistency.

Airport Database Management System | *SQL Server* | 2023

- Built a relational database schema securely hosting flight routes, aircraft fleet, and passenger data; optimized SQL queries and index strategies to increase data retrieval speed.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, C#, PHP, Java
- **Data Science & AI:** Data Analysis, Data Visualization, Machine Learning Algorithms
- **Web Technologies:** HTML5, CSS3, DOM Manipulation, Asynchronous Architecture
- **Game Development & Tools:** Unity, Unreal Engine, Git, Visual Studio, IntelliJ IDEA
- **Database Systems:** SQL Server, MySQL
- **Design & Office Applications:** MS Excel, Photoshop, Canva

EDUCATION

Izmir University of Economics | Izmir, Turkey

Computer Programming (Associate Degree) | 2024 – Present

- **Languages:** Turkish (Native), English (Intermediate), French (Basic)

SEMINARS & EVENTS

- **Global AI Hub Turkey:** Generative AI and Integration into Software Processes Summit (2024)
- **BTK Academy & IUE:** Future Technologies: Introduction to Data Science and Machine Learning Seminar (2023)
- **Game Developers Association (OGED):** Indie Game Development and Project Management with Unity Panel (2023)

ONGOING PROJECTS

Fan and Stadium Simulation Game | *Unity, Unreal Engine, C#* | 2023 – Present

- Developing a mixed simulation based on stadium economics and fan mechanics, centering on object-oriented programming principles. Continuing the processes of integrating in-game physics, AI-supported NPC behaviors, and scoring engines with next-generation engines.

Prompt Market Platform | *PHP, JavaScript, MySQL* | 2025 – Present

- Developing a dynamic marketplace web application where users can buy and sell artificial intelligence prompts. Working on the architecture of content filtering, authorization control, and secure data flow systems.

Disaster Notification Platform | *PHP, MySQL* | 2025 – Present

- Designing a location-based data processing web platform where users can make instant disaster notifications and receive regional alerts in emergencies. Optimization of database tables and integration of instant notification infrastructure are ongoing.

INTERESTS

- Sports and fitness
- Nature walks and camping activities
- Current technology trends, science, and artificial intelligence
